Street Opening Permit

Required Construction Practices

The following practice should be followed when you have to work within the Town's right-a-way. Any work that the Public Works Department has to do to correct this work will be billed to, and the responsibility of the person who takes out the road opening permit.

1. There has to be a completed (including the proper signatures) "Street Opening Permit". The fee schedule associated with this permit is on the permit. Permits will only be issued during the hours between 8AM & 3PM Monday, Tuesday, Thursday and Friday.
2. The utility cut is to be square and cut with the proper equipment so that the paving repair work can be done properly. Also the contractor will have proper signs for traffic control.
3. When back-filling the excavated area, *compaction* should be done at a minimum of every (2) two feet.
4. The top twelve to eighteen inches (12" – 18") shall be clean, dry gravel.
5. During the connection to the Town Sewer Line, the Public Works Director and or the Chief Wastewater Operator must be present to witness a proper tie-in.
6. Finally if job requires tapping into the Town Sewer Line, a provision for by-pass pumping must be in place before excavation starts. This would be the back-up plan if the contractor accidentally breaks the Towns Sewer Line.
